iShares ESG ETF Portfolios

1. Strong focus on sustainability

iShares ESG ETF Portfolios are comprised of ETFs that focus on highly rated environmental, social and governance (ESG) companies. Companies' business involvements are extensively screened for potentially higher ESG risks, such as fossil fuels. As a result, the portfolios have strong ESG characteristics compared to traditional balanced portfolios. The table below illustrates the enhanced ESG ratings of iShares ESG ETF Portfolios compared to iShares Core ETF Portfolios. Specifically, the iShares ESG ETF Portfolios have higher ESG scores and lower carbon intensities. They also have less exposure to companies with severe controversies and more exposure to higher ESG-rated companies.

- **MSCI ESG Controversy Score:** The score signals whether a company has a notable controversy related to the company's operations and/or products, and signals the severity of the social or environmental impact of the controversy. The score is on a 0-10 scale, with 0 meaning having the most severe controversy and 10 meaning having no notable controversy.
- **MSCI ESG Quality Score:** The score measures the ability of underlying holdings to manage key medium to long term risks and opportunities arising from environmental, social, and governance factors, and is calculated as the weighted average of the underlying holdings' ESG scores. It is provided on a 0-10 scale, with 0 and 10 being the respective lowest and highest possible fund scores. MSCI rates underlying holdings according to their exposure to 37 industry specific ESG risks and their ability to manage those risks relative to peers. These issuer-level ESG ratings correspond to an issuer-level ESG score.

6.0	6.9	→	High
5.0	5.9	→	Average
